

## Value based solutions for a more sustainable supply chain.™

Eco-Trax actively manages and tracks your recyclables, reusables and food waste. We will enhance your operational controls and increase your revenue, while improving your sustainability performance.

As innovators in the CleanTech industry, we developed a proprietary, data-driven platform that provides a single source of truth to better manage all of your supply chain materials .

## Partner with supply chain recycling management experts.

- ✓ Maximum revenue for your recyclables
- ✓ Compensation for 100% of the units generated, 100% of the time
- ✓ Enhanced sustainability performance and regulatory compliance.
- ✓ Accurate, transparent data collection, comprehensive sustainability reporting, block-chain capable.

**At EcoTrax our approach is simple:**

**We focus on what we do best- allowing you to focus on what you do best.**

## We are your partner. Not your vendor.

Unlike recyclers, we do not benefit if you are paid below market for your recyclables or if you are not paid for all of the materials generated. We sit on your side of the table which means that we are mutually incentivized to maximize the revenue of your recycling programs.

Whether we're shipping your OCC, plastics, pallets or food waste to multiple vendors or out of market, we will manage each recyclable as a valuable commodity and will manage as many recycling vendors as necessary to maximize your compensation.

## Proprietary technology

EcoTrax offers our customers an automated materials management process with enhanced control and transparency. Audit-ready data is captured and reported in a system that's future-ready and flexible to meet your needs today and tomorrow.

- ✓ Reliable, high-fidelity, tamper-proof data
- ✓ Integrated, index-based pricing to ensure maximum compensation.
- Real-time visibility of activity and unit
- ✓ volumes to reduce shrink (EcoTrax historical average = 12.8%)

## Expert oversight and execution

Our team understands both the complexity of retail distribution center operations and the flow of reusable and recyclable packaging materials through them. We put our expertise to work to optimize your financial and sustainability outcomes and streamline handling processes.

## Multiple On-site Management Programs Available

While traditional consulting support leaves clients responsible for implementation and the ultimate success of the program, we engage with your teams to provide customized solutions and hands on support right from the start.

From a comprehensive, on-site store return and recycling management program to a single sustainability and compliance audit, we focus on minimizing loss exposure while maximizing you compensation. Simultaneously, we will segregate your regenerative materials to improve your zero-waste initiatives.

## CleanTech innovation that delivers more for our customers.

- ✓ Enhanced emissions tracking and reporting
- ✓ Transparent oversight for improved corporate visibility.
- ✓ Block-Chain ready capabilities
